

WSQ PROFESSIONAL COURSE

Generative AI for Finance and Fintech

**From governed insight to controlled
finance action**

TGS-2026065050 • ACC-ICT-5004-1.1

Tertiary Infotech Academy Pte Ltd
v4.0 • 23 August 2026

Welcome and digital attendance

WHY IT MATTERS

Decision principle

Scan the attendance QR code shown by your trainer.
Keep the LMS open for learning evidence.

01 Confirm your registered name

02 Mark attendance at the required checkpoints

03 Ask the trainer if your record does not appear

Meet your trainer

WHY IT MATTERS

Decision principle

Dr. Alfred Ang facilitates the course as a finance-AI decision and governance workshop.

- 01** Connect technical capabilities to business controls
- 02** Challenge assumptions with evidence
- 03** Keep learner and assessment data confidential

How we will work

WHY IT MATTERS

Decision principle

The class alternates between visual concepts, decision conversations and evidence-led labs.

01 Question claims and reconcile numbers

02 Use synthetic data in the learning environment

03 Share reasoning without sharing credentials

Learning environment

WHY IT MATTERS

Decision principle

All detailed procedures live in the Learner Guide and each lab folder.

01 Slides explain concepts and decisions

02 Labs contain starter data and acceptance checks

03 LMS receives only learner-facing assessment papers

Four-day journey

WHY IT MATTERS

Decision principle

Build understanding, apply finance copilots, orchestrate agents, then secure and govern them.

01 Day 1: foundations and opportunity portfolio

02 Day 2: Copilot in Excel and Finance Agent

03 Day 3: Microsoft 365 Copilot and Copilot Studio

04 Day 4: risk, security, fraud, roadmap and assessment

Skills framework alignment

WHY IT MATTERS

Decision principle

ACC-ICT-5004-1.1 · Digital Technology Adoption and Innovation

01 Knowledge: K1–K4

02 Abilities: A1–A5

03 Evidence: 10 connected labs plus two assessments

Learning outcomes

WHY IT MATTERS

Decision principle

By the end, you can support, evaluate, adopt, govern and economically scale finance AI.

01

LO1: Support Artificial Intelligence (AI) and Generative AI innovations to champion organisation-wide innovation.

02

LO2: Evaluate and implement GAI technologies for the organisation.

03

LO3: Review and adopt new GAI technologies by reviewing use cases in finance operations.

04

LO4: Review AI ethics and governance in organisation processes for proactive risk monitoring and safety.

05

LO5: Review emerging trends in GAI and strategise cost-control measures to support innovation initiatives.

Assessment architecture

WHY IT MATTERS

Decision principle

Assessment samples the same judgement and evidence practised in the labs.

01 Written Assessment (SAQ): 4 open-ended questions · 60 minutes

02 Case Study: 5 integrated tasks · 60 minutes

03 Open book; no practice examination

04 Written items map to K2/K1/K3/K4; case tasks map to A1–A5

Evidence standard

WHY IT MATTERS

Decision principle

A strong answer is traceable, reconciled, controlled and decision-ready.

01 Use the supplied scenario and data

02 State assumptions explicitly

03 Show formulas, tests or control evidence

04 Name the accountable reviewer and escalation path

Trainer profile template

EXPERIENCE

Finance and fintech practice

Relevant experience in finance operations, analytics, risk, governance or technology adoption.

CAPABILITY

AI facilitation capability

Can demonstrate copilots and agents while keeping evidence, privacy, security and accountability visible.

BOUNDARY

Assessment role

Explains evidence standards without coaching answers.

LEARNING

Learner support

Creates a safe environment for questions, peer review and escalation.

Download course material

Accountability and evidence travel with the work

Assessment flow and sign-off

Open book • two controlled instruments • no practice examination

Introduction to Generative AI and Its Foundations in Finance

AI, machine learning, GenAI, agents, finance value chains and responsible innovation

01

Competency focus K2 · A1

AI, ML, GenAI and agents

These are nested capabilities, not interchangeable labels.

The finance decision loop

Finance AI creates value only when insight changes an accountable decision.

Generative versus predictive AI

Prediction estimates what may happen; generation explains, drafts or synthesises.

1

01

Credit default probability is predictive

2

02

A variance narrative is generative

3

03

Fraud triage often combines both

4

04

Controls differ by impact and autonomy

Agentic AI anatomy

A useful agent is a governed system of instructions, knowledge, tools and memory.

Single-agent versus multi-agent

Specialisation can improve clarity, but orchestration adds failure modes.

1

01

Single agents are simpler to test

2

02

Multi-agent systems separate roles

3

03

Handoffs need contracts and logs

4

04

A supervisor agent must not become an unbounded approver

Where finance creates value

The strongest early uses reduce repetitive analysis while preserving judgement.

Three horizons of adoption

Assist, automate and transform require progressively stronger controls.

Data grounding

Finance answers must be tied to authoritative, dated and permissioned sources.

1

01

Use controlled workbooks and ERP extracts

2

02

Retain source links and as-of dates

3

03

Separate facts from assumptions

4

04

Do not infer missing accounting policy

Prompt contracts for finance

A strong prompt names the role, task, data boundary, controls and output schema.

Human accountability

AI can prepare and recommend; accountable people approve material finance decisions.

1

01

Define preparer and reviewer roles

2

02

Set monetary and risk thresholds

3

03

Require evidence for overrides

4

04

Escalate ambiguity rather than fabricate

Innovation portfolio

Select use cases by value, feasibility, controllability and learning speed.

1

01

Prioritise low-risk high-frequency work

2

02

Avoid consumer-impact decisions as first pilots

3

03

Measure baseline before automation

4

04

Design an exit path and fallback

Responsible experimentation

A sandbox is a control boundary, not a licence to upload sensitive data.

1

01

Use synthetic or masked data

2

02

Restrict connectors

3

03

Log prompt and output tests

4

04

Promote through governed environments

Accounts payable invoice triage

CONTROLLERSHIP

Operating pattern

Route invoices, detect missing fields and draft exception notes

OUTCOME

Value hypothesis

Lower handling time

FAILURE MODE

Primary risk

Invoice fraud and duplicate payments

GOVERNED DESIGN

Control and evidence

Three-way match, duplicate rules, reviewer approval

Measure: Touchless rate · exception ageing

Accounts payable invoice triage: control cockpit

KPI Touchless rate • exception ageing • Pattern source: Microsoft finance scenario library

Cash application

WORKING CAPITAL

Operating pattern

Match remittances to open invoices and explain residuals

OUTCOME

Value hypothesis

Faster posting

FAILURE MODE

Primary risk

Incorrect customer allocation

GOVERNED DESIGN

Control and evidence

Tolerance rules, customer key validation, audit trail

Measure: Auto-match rate · unapplied cash

Cash application: control cockpit

KPI Auto-match rate • unapplied cash • **Pattern source:** Microsoft finance scenario library

Collections prioritisation

WORKING CAPITAL

Operating pattern

Rank overdue accounts and draft context-aware outreach

OUTCOME

Value hypothesis

Improved DSO

FAILURE MODE

Primary risk

Unfair or inappropriate communication

GOVERNED DESIGN

Control and evidence

Approved templates and human send approval

Measure: Promise-to-pay rate · DSO

Collections prioritisation: control cockpit

KPI Promise-to-pay rate • DSO • **Pattern source:** Microsoft Finance Agent

Expense policy assistant

CONTROLLERSHIP

Operating pattern

Answer employee expense questions from approved policy

OUTCOME

Value hypothesis

Fewer queries

FAILURE MODE

Primary risk

Outdated or unauthorised advice

GOVERNED DESIGN

Control and evidence

Effective-date citations and escalation
Measure: First-contact resolution

Expense policy assistant: control cockpit

KPI First-contact resolution • Pattern source: Microsoft Copilot Studio

Regulatory filing summarisation

COMPLIANCE

Operating pattern

Extract obligations and draft a review checklist

OUTCOME

Value hypothesis

Faster interpretation

FAILURE MODE

Primary risk

Hallucinated requirement

GOVERNED DESIGN

Control and evidence

Primary-source citations and legal review

Measure: Review hours · citation accuracy

Regulatory filing summarisation: control cockpit

KPI Review hours • citation accuracy • **Pattern source:** US Treasury AI report

Earnings-call preparation

FP&A

Operating pattern

Synthesize performance drivers and likely stakeholder questions

OUTCOME

Value hypothesis

Better preparation

FAILURE MODE

Primary risk

Selective or misleading narrative

GOVERNED DESIGN

Control and evidence

Reconcile to approved results and disclosures

Measure: Prep cycle time · corrections

Earnings-call preparation: control cockpit

KPI Prep cycle time • corrections • **Pattern source:** AFP use cases

Treasury liquidity briefing

TREASURY

Operating pattern

Summarise cash, facilities and forecast risks

OUTCOME

Value hypothesis

Faster visibility

FAILURE MODE

Primary risk

Stale balances

GOVERNED DESIGN

Control and evidence

As-of timestamps and source reconciliation

Measure: Forecast error · liquidity headroom

Treasury liquidity briefing: control cockpit

KPI Forecast error • liquidity headroom • Pattern source: Industry pattern

Credit memo drafting

LENDING

Operating pattern

Assemble borrower facts and analyst rationale

OUTCOME

Value hypothesis

Analyst productivity

FAILURE MODE

Primary risk

Bias and unsupported conclusions

GOVERNED DESIGN

Control and evidence

Reason codes, source citations, credit approval

Measure: Turnaround · override rate

Credit memo drafting: control cockpit

KPI Turnaround • override rate • Pattern source: US Treasury AI report

Insurance claims summarisation

INSURANCE

Operating pattern

Summarise documents and flag inconsistencies

OUTCOME

Value hypothesis

Faster triage

FAILURE MODE

Primary risk

Sensitive-data leakage and wrongful denial

GOVERNED DESIGN

Control and evidence

Access control, human adjudication, appeal

Measure: Cycle time · rework

Insurance claims summarisation: control cockpit

KPI Cycle time • rework • **Pattern source:** US Treasury AI report

Financial research synthesis

MARKETS

Operating pattern

Summarise filings, transcripts and macro evidence

OUTCOME

Value hypothesis

Broader coverage

FAILURE MODE

Primary risk

Unverified market claims

GOVERNED DESIGN

Control and evidence

Citations, as-of dates, restricted recommendation scope

Measure: Source coverage · correction rate

Financial research synthesis: control cockpit

KPI Source coverage • correction rate • Pattern source: Industry pattern

JPMorgan contract intelligence

CASE

Document review

EVIDENCE

What happened

Machine learning and language processing applied to high-volume contract review; use as a pattern for evidence extraction, not autonomous legal approval.

Transferable pattern

Translate the operating pattern—not the headline—into your finance context.

Control question

What evidence would justify moving from assistive output to a bounded action?

OCBC AI portfolio

CASE

Banking

EVIDENCE

What happened

The legacy deck profiles customer, operations and decision-support uses; the updated lesson separates reported capability from training assumptions.

Transferable pattern

Translate the operating pattern—not the headline—into your finance context.

Control question

What evidence would justify moving from assistive output to a bounded action?

Morgan Stanley knowledge assistant

CASE

Wealth management

EVIDENCE

What happened

A grounded assistant helps advisers navigate approved internal research while the adviser remains accountable for client advice.

Transferable pattern

Translate the operating pattern—not the headline—into your finance context.

Control question

What evidence would justify moving from assistive output to a bounded action?

Topic 1 - value-and-control portfolio

INTERPRET

Read the signal

Compare magnitude, exceptions and trend before generating a narrative.

REVIEW

Control the conclusion

Reconcile to source totals, verify units and distinguish fact from hypothesis.

Lab 1 • Prioritise a Finance AI Use-Case Portfolio

K2 • A1

Scenario

Northstar Finance is selecting its first governed AI pilots across FP&A, controllership, treasury, risk and customer operations.

90 MINUTES

Objective

Score finance AI opportunities by value, feasibility, risk and learning speed.

SUBMIT

Evidence

A prioritised portfolio and one-page pilot charter.

Acceptance: Weights total 100%; every shortlisted use case has a named owner, baseline KPI, risk tier and stop condition.

Lab 1 • evidence journey

Accountability and evidence travel with the work

Excel Copilot for Finance Planning and Analysis

Data readiness, formulas, dashboards, FP&A, variance analysis, reconciliation and controls

02

Competency focus K1 · A2

Copilot in Excel today

Copilot edits native Excel objects so the result remains reviewable and editable.

1

01

Works with tables, formulas and cell ranges

2

02

Creates charts and PivotTables

3

03

Supports edit, plan and chat modes

4

04

Can complete multi-step workbook tasks

Finance Agent surfaces

Finance Agent brings purpose-built processes into Excel, Outlook and Microsoft Copilot.

Workbook readiness

Reliable AI analysis starts with a flat, typed, labelled table.

1

01

One row per business event

2

02

Stable headers without merged cells

3

03

Dates and currencies stored as real values

4

04

Unique keys and clear dimensions

Table design for finance

Structure determines whether formulas and AI explanations reconcile.

1

01

Separate source, assumptions
and outputs

2

02

Use Excel Tables and
structured references

3

03

Protect key formulas

4

04

Document units and sign
conventions

Plan, edit or chat

Choose the least invasive Copilot mode that meets the task.

1

01

Chat for read-only exploration

2

02

Plan to review an intended approach

3

03

Edit for bounded workbook changes

4

04

Review changes before acceptance

Formula generation

Generated formulas are proposals that require audit like human-authored formulas.

Finance formula toolkit

A compact formula vocabulary covers much of operational analysis.

1

01

SUMIFS for controlled aggregation

2

02

XLOOKUP for mapped dimensions

3

03

IFERROR for explicit exception handling

4

04

FORECAST.LINEAR and scenario assumptions for planning

Dashboard design

A finance dashboard is a decision surface, not a collage of charts.

Variance analysis

Variance analysis connects a number to its business drivers and next action.

Period-over-period structure

Time columns and grouping determine the meaning of MoM, QoQ and YoY comparisons.

1

01

Order periods consistently

2

02

Separate source data from
PivotTable

3

03

Retain the comparison basis

4

04

Check seasonality before
escalation

Reconciliation design

Matching is a rules-and-evidence problem before it becomes an AI problem.

Close controls

Automation should strengthen evidence for completeness, accuracy and cut-off.

1

01

Control totals before and after

2

02

Exception queues with ageing

3

03

Reviewer sign-off

4

04

Immutable activity history

Forecasting with Copilot

Copilot accelerates model assembly, but assumptions remain management-owned.

Scenario planning

A scenario changes coherent assumptions, not isolated cells.

Management commentary

A useful narrative quantifies the issue, identifies a driver and names an action.

1

01

State magnitude and period

2

02

Distinguish fact from hypothesis

3

03

Name owner and due date

4

04

Avoid unsupported causal claims

Excel control checklist

Before sharing an AI-assisted workbook, prove structure, formulas, outputs and access.

1

01

Formula error scan

2

02

Control-total reconciliation

3

03

Sensitivity and edge-case tests

4

04

Protected source and
assumption ranges

Budget build assistant

FP&A

Operating pattern

Create an editable driver-based budget structure

OUTCOME

Value hypothesis

Faster model assembly

FAILURE MODE

Primary risk

Hidden hard-codes

GOVERNED DESIGN

Control and evidence

Formula audit and assumption register

Measure: Build time · formula defects

Budget build assistant: control cockpit

KPI Build time • formula defects • Pattern source: Copilot in Excel

Management variance analysis

FP&A

Operating pattern

Identify material period variances and draft drivers

OUTCOME

Value hypothesis

Shorter reporting cycle

FAILURE MODE

Primary risk

False causality

GOVERNED DESIGN

Control and evidence

Materiality rules and evidence-backed narrative

Measure: Close days · narrative corrections

Management variance analysis: control cockpit

KPI Close days • narrative corrections • Pattern source: Microsoft Finance Agent

Balance-sheet reconciliation

CONTROLLERSHIP

Operating pattern

Compare account structures and generate reconciliation reports

OUTCOME

Value hypothesis

Faster close

FAILURE MODE

Primary risk

Incorrect matching

GOVERNED DESIGN

Control and evidence

Deterministic rules, tolerance and reviewer sign-off

Measure: Auto-match rate · aged items

Balance-sheet reconciliation: control cockpit

KPI Auto-match rate • aged items • **Pattern source:** Microsoft Finance Agent

Intercompany matching

CONTROLLERSHIP

Operating pattern

Match reciprocal entries and surface entity or FX differences

OUTCOME

Value hypothesis

Fewer unresolved items

FAILURE MODE

Primary risk

Cross-entity access leakage

GOVERNED DESIGN

Control and evidence

Entity scoping and elimination controls

Measure: Unmatched value · ageing

Intercompany matching: control cockpit

KPI Unmatched value • ageing • **Pattern source:** Industry pattern

Revenue bridge

FP&A

Operating pattern

Decompose growth into volume, price, mix and FX

OUTCOME

Value hypothesis

Clearer performance story

FAILURE MODE

Primary risk

Incorrect attribution

GOVERNED DESIGN

Control and evidence

Reconciled bridge and driver definitions
Measure: Unexplained variance

Revenue bridge: control cockpit

KPI Unexplained variance • Pattern source: Industry pattern

Rolling forecast

FP&A

Operating pattern

Extend forecast from recent actuals and operational drivers

OUTCOME

Value hypothesis

Faster reforecast

FAILURE MODE

Primary risk

Overfitting and stale assumptions

GOVERNED DESIGN

Control and evidence

Back-testing and scenario review

Measure: MAPE · bias

Rolling forecast: control cockpit

KPI MAPE • bias • **Pattern source: Copilot in Excel**

Headcount cost forecast

FP&A

Operating pattern

Model hires, attrition, salary, bonus and vacancy timing

OUTCOME

Value hypothesis

Better workforce planning

FAILURE MODE

Primary risk

Personal-data exposure

GOVERNED DESIGN

Control and evidence

Aggregate data and restricted payroll access

Measure: Forecast error · vacancy variance

Headcount cost forecast: control cockpit

KPI Forecast error • vacancy variance • Pattern source: Industry pattern

Working-capital dashboard

TREASURY

Operating pattern

Visualise DSO, DPO, inventory days and cash conversion

OUTCOME

Value hypothesis

Actionable cash view

FAILURE MODE

Primary risk

Metric inconsistency

GOVERNED DESIGN

Control and evidence

Definitions and control totals

Measure: Cash conversion cycle

Working-capital dashboard: control cockpit

KPI Cash conversion cycle • Pattern source: Industry pattern

Spend anomaly review

PROCUREMENT

Operating pattern

Highlight unusual vendor, amount or timing patterns

OUTCOME

Value hypothesis

Leakage reduction

FAILURE MODE

Primary risk

False accusations

GOVERNED DESIGN

Control and evidence

Risk scores as triage only
Measure: Confirmed exceptions · review load

Spend anomaly review: control cockpit

KPI Confirmed exceptions • review load • Pattern source: Industry pattern

Board pack production

CFO OFFICE

Operating pattern

Assemble charts, narrative and actions from approved workbook

OUTCOME

Value hypothesis

Shorter reporting cycle

FAILURE MODE

Primary risk

Disclosure inconsistency

GOVERNED DESIGN

Control and evidence

Single approved source and CFO review

Measure: Cycle time · revisions

Board pack production: control cockpit

KPI Cycle time • revisions • **Pattern source:** Microsoft 365 Copilot

Finance Agent reconciliation

CASE

Controllership

EVIDENCE

What happened

Microsoft describes automated reconciliation reports, discrepancy suggestions and saved audit-ready summaries in Excel.

Transferable pattern

Translate the operating pattern—not the headline—into your finance context.

Control question

What evidence would justify moving from assistive output to a bounded action?

Finance Agent variance analysis

CASE

FP&A

EVIDENCE

What happened

AI identifies material period variances, contributing factors and a structured narrative from flat source data and PivotTables.

Transferable pattern

Translate the operating pattern—not the headline—into your finance context.

Control question

What evidence would justify moving from assistive output to a bounded action?

Topic 2 - value-and-control portfolio

INTERPRET

Read the signal

Compare magnitude, exceptions and trend before generating a narrative.

REVIEW

Control the conclusion

Reconcile to source totals, verify units and distinguish fact from hypothesis.

Lab 2 • Prepare Finance Data for Copilot in Excel

K1 • A2

Scenario

The FP&A team receives a mixed-quality export from the billing system and must prepare it for Copilot analysis.

90 MINUTES

Objective

Convert messy finance transactions into an analysis-ready Excel Table with control totals.

SUBMIT

Evidence

A clean transactions table, quality log and reconciled control totals.

Acceptance: Duplicate count is zero, required-field errors are zero, and clean totals reconcile to the supplied control figures.

Lab 2 • evidence journey

Accountability and evidence travel with the work

Lab 3 • Build an FP&A Formula Model and Dashboard

K1 • A2

Scenario

Northstar's CFO needs a monthly performance dashboard and a transparent base/downside forecast.

150 MINUTES

Objective

Use native finance formulas, scenarios and charts to build an auditable management dashboard.

SUBMIT

Evidence

An editable dashboard with actual, budget, variance, forecast and driver views.

Acceptance: Dashboard charts remain linked to data; all formula checks pass; total variance equals actual less budget; scenarios use assumption cells rather than hard-coded outputs.

Lab 3 • evidence journey

Accountability and evidence travel with the work

Lab 4 • Reconcile Accounts and Explain Variances

K1 • A2

Scenario

The controller must reconcile ERP and bank/ledger extracts and explain material monthly movements.

120 MINUTES

Objective

Apply deterministic matching and Finance Agent-style variance analysis to a month-end close.

SUBMIT

Evidence

A reconciliation report, exception queue and evidence-backed variance narrative.

Acceptance: Matched plus exception values reconcile to each source; all unresolved items have a reason and owner; the narrative cites actual values and materiality thresholds.

Lab 4 • evidence journey

Accountability and evidence travel with the work

Practical Applications of Agentic AI to Automate Financial Processes

Finance query agents, close orchestration, collections, reporting, multi-agent design and UAT

03

Competency focus A3

Microsoft 365 Copilot in finance

The same grounded context can support analysis, communication and decision packs.

Finance query management

A Copilot Studio agent can answer policy and process questions from approved knowledge.

Collections agent pattern

Collections combines ERP context, prioritisation and controlled communication.

Balance-sheet reconciliation agent

An agent can coordinate matching, evidence requests and reviewer handoffs.

Copilot Studio building blocks

Knowledge, tools, topics and instructions must be designed as one control system.

Agent authentication

An agent must know who is asking before retrieving or acting on finance data.

1

01

Authenticate with Microsoft
Entra ID

2

02

Apply least privilege

3

03

Preserve source-level
permissions

4

04

Avoid anonymous access for
internal finance knowledge

Tools and connectors

Every connector expands both capability and data-exfiltration risk.

1

01

Classify as business, non-business or blocked

2

02

Separate read from write tools

3

03

Constrain endpoints and actions

4

04

Monitor connection ownership

Generative orchestration

The agent selects knowledge and tools dynamically; testing must cover unexpected routes.

Multi-agent close

Specialist agents can prepare reconciliations, variances and commentary under a close supervisor.

Agent handoff contract

A handoff needs a structured payload, status and evidence pointer.

UAT for finance agents

UAT proves usefulness and control performance under realistic data and edge cases.

Agent evaluation

Measure answer quality, groundedness, task completion and control adherence separately.

ALM and environments

Move agents through development, test and production with explicit approvals.

Operational monitoring

A live agent needs owners, telemetry and incident procedures.

When not to automate

Keep tasks human-led when judgement, novelty or irreversible impact dominates.

Internal finance query agent

FINANCE OPERATIONS

Operating pattern

Answer process and policy questions with citations

OUTCOME

Value hypothesis

Reduced support load

FAILURE MODE

Primary risk

Oversharing

GOVERNED DESIGN

Control and evidence

Authentication, source permissions and DLP

Measure: Resolution · escalation

Internal finance query agent: control cockpit

KPI Resolution • escalation • Pattern source: Microsoft scenario library

Close orchestration agent

CONTROLLERSHIP

Operating pattern

Coordinate tasks, owners, evidence and exceptions

OUTCOME

Value hypothesis

More predictable close

FAILURE MODE

Primary risk

Unapproved journal or sign-off

GOVERNED DESIGN

Control and evidence

Read-only by default and explicit approvals

Measure: On-time tasks · reopen rate

Close orchestration agent: control cockpit

KPI On-time tasks • reopen rate • **Pattern source:** Microsoft scenario library

Collections copilot

WORKING CAPITAL

Operating pattern

Bring ERP context into Outlook and prepare response options

OUTCOME

Value hypothesis

Scalable outreach

FAILURE MODE

Primary risk

Automated external message risk

GOVERNED DESIGN

Control and evidence

Human approval and communication log

Measure: DSO · response rate

Collections copilot: control cockpit

KPI DSO • response rate • Pattern source: Microsoft Finance Agent

Procure-to-pay exception agent

FINANCE OPERATIONS

Operating pattern

Gather missing evidence and route exceptions

OUTCOME

Value hypothesis

Reduced queue ageing

FAILURE MODE

Primary risk

Tool abuse

GOVERNED DESIGN

Control and evidence

Whitelisted actions and amount thresholds

Measure: Resolution time

Procure-to-pay exception agent: control cockpit

KPI Resolution time • Pattern source: Microsoft Copilot Studio

Tax research agent

TAX

Operating pattern

Retrieve internal positions and authoritative guidance

OUTCOME

Value hypothesis

Faster research

FAILURE MODE

Primary risk

Outdated or cross-jurisdiction advice

GOVERNED DESIGN

Control and evidence

Jurisdiction filters, effective dates, expert review

Measure: Research time · citation quality

Tax research agent: control cockpit

KPI Research time • citation quality • Pattern source: Industry pattern

Audit evidence assistant

AUDIT

Operating pattern

Index, retrieve and summarise evidence for test procedures

OUTCOME

Value hypothesis

Reduced search time

FAILURE MODE

Primary risk

Evidence incompleteness

GOVERNED DESIGN

Control and evidence

Evidence IDs and auditor judgement
Measure: Retrieval precision · gaps

Audit evidence assistant: control cockpit

KPI Retrieval precision • gaps • **Pattern source:** Industry pattern

Disclosure checklist agent

REPORTING

Operating pattern

Map approved disclosures to evidence and owners

OUTCOME

Value hypothesis

Fewer omissions

FAILURE MODE

Primary risk

Wrong reporting basis

GOVERNED DESIGN

Control and evidence

Controlled checklist and preparer/reviewer

Measure: Open items · late changes

Disclosure checklist agent: control cockpit

KPI Open items • late changes • **Pattern source:** Industry pattern

Investment research multi-agent

MARKETS

Operating pattern

Separate retrieval, financial analysis, risk challenge and writing

OUTCOME

Value hypothesis

Traceable analysis

FAILURE MODE

Primary risk

Compounding agent errors

GOVERNED DESIGN

Control and evidence

Handoff schemas and independent challenge

Measure: Citation accuracy · disagreement rate

Investment research multi-agent: control cockpit

KPI Citation accuracy • disagreement rate • Pattern source: Databricks investment assistant

Customer service banking agent

RETAIL BANKING

Operating pattern

Answer product and service questions using approved content

OUTCOME

Value hypothesis

24/7 support

FAILURE MODE

Primary risk

Unsuitable advice

GOVERNED DESIGN

Control and evidence

Scope limits and human handoff
Measure: Containment · complaints

Customer service banking agent: control cockpit

KPI Containment • complaints • Pattern source: OCBC legacy case

Loan document review

LENDING

Operating pattern

Extract covenants, conditions and exceptions

OUTCOME

Value hypothesis

Faster review

FAILURE MODE

Primary risk

Missed clauses

GOVERNED DESIGN

Control and evidence

Clause-level citations and legal review

Measure: Review time · missed exceptions

Loan document review: control cockpit

KPI Review time • missed exceptions • **Pattern source:** JPMorgan COiN pattern

Finance query management

CASE

Finance operations

EVIDENCE

What happened

Microsoft's scenario library uses Copilot Studio to answer internal finance process questions from custom integrations and approved data.

Transferable pattern

Translate the operating pattern—not the headline—into your finance context.

Control question

What evidence would justify moving from assistive output to a bounded action?

Collections agent

CASE

Working capital

EVIDENCE

What happened

An agent combines customer and ERP context with drafted communication while retaining human accountability for external contact.

Transferable pattern

Translate the operating pattern—not the headline—into your finance context.

Control question

What evidence would justify moving from assistive output to a bounded action?

Balance-sheet reconciliation agent

CASE

Close

EVIDENCE

What happened

An agent pattern accelerates matching, exception analysis and close evidence without removing reviewer sign-off.

Transferable pattern

Translate the operating pattern—not the headline—into your finance context.

Control question

What evidence would justify moving from assistive output to a bounded action?

Topic 3 - value-and-control portfolio

INTERPRET

Read the signal

Compare magnitude, exceptions and trend before generating a narrative.

REVIEW

Control the conclusion

Reconcile to source totals, verify units and distinguish fact from hypothesis.

Lab 5 • Create a Microsoft 365 Finance Decision Pack

A3

Scenario

The CFO needs a board-ready summary and a draft response to a major overdue customer.

90 MINUTES

Objective

Turn approved Excel evidence into a controlled Word brief, PowerPoint story and collections message.

SUBMIT

Evidence

A three-part decision pack with traceable numbers and approval status.

Acceptance: All repeated figures match the source workbook; facts and recommendations are separated; the external message remains a draft with an approver.

Lab 5 • evidence journey

Accountability and evidence travel with the work

Lab 6 • Build a Grounded Finance Query Agent

A3

Scenario

Finance staff need reliable answers about expenses, close deadlines, delegation and reconciliation evidence.

150 MINUTES

Objective

Build and test a Copilot Studio agent grounded on approved finance policies.

SUBMIT

Evidence

A finance query agent, knowledge pack, test evidence and escalation design.

Acceptance: The agent cites approved sources, refuses unsupported answers, respects access boundaries and passes all critical UAT cases before any publish decision.

Lab 6 • evidence journey

Accountability and evidence travel with the work

Lab 7 • Design and UAT a Multi-Agent Close Workflow

A3

Scenario

Northstar wants reconciliation, variance and disclosure agents coordinated by a close supervisor without autonomous journal approval.

150 MINUTES

Objective

Design a supervisor and specialist-agent workflow with structured handoffs and approval gates.

SUBMIT

Evidence

An agent architecture, handoff contract, RACI, UAT results and rollback plan.

Acceptance: No agent can approve or post a journal; every handoff is structured; critical tests pass; monitoring and rollback have named owners.

Lab 7 • evidence journey

Accountability and evidence travel with the work

AI Risk Management, Security and Fraud Detection

FEAT, model risk, cyber threats, identity, DLP, fraud analytics, monitoring and human oversight

04

Competency focus K3 - A4

Finance AI risk taxonomy

AI risk spans data, model, cyber, compliance, third-party and human use.

FEAT principles

Fairness, Ethics, Accountability and Transparency form a practical finance governance lens.

1

01

Fair treatment and
representative testing

2

02

Ethical purpose and
proportionality

3

03

Named owners and challenge

4

04

Understandable evidence and
disclosure

Financial Services AI RMF

Govern, map, measure and manage must be adapted to operational and consumer impact.

AI system inventory

You cannot govern finance AI that has no owner, data map or deployment record.

Risk tiering

Control intensity should rise with autonomy, data sensitivity and decision impact.

Prompt injection

Untrusted content can manipulate an agent into ignoring instructions or exfiltrating data.

1

01

Treat retrieved content as data,
not authority

2

02

Filter and segment sources

3

03

Constrain tools independently

4

04

Test adversarial instructions

Data poisoning

Corrupted training or grounding data can create persistent and plausible errors.

Sensitive-data leakage

Finance prompts can expose payroll, customer, transaction or strategy data.

1

01

Classify and minimise

2

02

Use DLP and sensitivity labels

3

03

Restrict public knowledge sources

4

04

Log and investigate risky use

Identity and access

Agent permissions should never exceed the speaking user's authorised finance access.

Third-party risk

AI providers concentrate operational, data, model and exit risk.

Model risk

Performance evidence must match the intended finance decision and operating conditions.

Hallucination controls

Fluent text is not evidence; high-impact claims need retrieval and reconciliation.

1

01

Require citations

2

02

Constrain to known sources

3

03

Verify numbers independently

4

04

Escalate missing evidence

Fraud detection pipeline

Fraud AI combines behavioural features, probabilistic scores and investigator feedback.

Class imbalance

High accuracy can hide a model that misses nearly every fraud case.

1

01

Use precision and recall

2

02

Inspect PR-AUC

3

03

Tune threshold to business cost

4

04

Stratify evaluation data

Confusion-matrix economics

False positives create friction; false negatives create loss and harm.

1

01

Quantify review cost

2

02

Quantify expected fraud loss

3

03

Choose threshold with capacity

4

04

Review segment-level impact

Explainability

Finance needs reasons suitable for reviewers, customers and regulators.

1

01

Global feature importance

2

02

Local reason codes

3

03

Counterfactual or sensitivity
analysis

4

04

Plain-language limitation
statement

Fraud alert narrative

Generation adds value after detection by assembling evidence into a controlled case summary.

Monitoring and drift

Fraud tactics, populations and economic conditions change.

Copilot Studio DLP

Data policies separate business, non-business and blocked connectors.

1

01

Prevent risky connector combinations

2

02

Block unauthenticated channels

3

03

Restrict knowledge sources

4

04

Enforce policies in real time

Security-by-design gate

An agent should not publish until identity, data, tools, testing and monitoring are approved.

Card fraud detection

FRAUD

Operating pattern

Score transactions using behaviour, merchant and device signals

OUTCOME

Value hypothesis

Lower fraud loss

FAILURE MODE

Primary risk

False positives and model drift

GOVERNED DESIGN

Control and evidence

Threshold economics and investigator feedback

Measure: Recall · precision · loss

Card fraud detection: control cockpit

KPI Recall • precision • loss • Pattern source: Mastercard reported pattern

AML investigation summarisation

COMPLIANCE

Operating pattern

Assemble transactions, entities and evidence into a case narrative

OUTCOME

Value hypothesis

Faster investigation

FAILURE MODE

Primary risk

Privacy and confirmation bias

GOVERNED DESIGN

Control and evidence

Evidence links and investigator approval

Measure: Case time · SAR quality

AML investigation summarisation: control cockpit

Payments

EVIDENCE

What happened

A reported GenAI-enhanced fraud model analyses transaction and device context to support suspicious-transaction assessment.

Transferable pattern

Translate the operating pattern—not the headline—into your finance context.

Control question

What evidence would justify moving from assistive output to a bounded action?

Standard Chartered security balance

CASE

Banking security

EVIDENCE

What happened

A real-world discussion of innovation with security reinforces layered controls, identity, monitoring and operational resilience.

Transferable pattern

Translate the operating pattern—not the headline—into your finance context.

Control question

What evidence would justify moving from assistive output to a bounded action?

US Treasury sector findings

CASE

Financial services

EVIDENCE

What happened

Treasury highlights data poisoning, leakage, integrity, explainability, third-party concentration and cross-enterprise governance.

Transferable pattern

Translate the operating pattern—not the headline—into your finance context.

Control question

What evidence would justify moving from assistive output to a bounded action?

Topic 4 - value-and-control portfolio

INTERPRET

Read the signal

Compare magnitude, exceptions and trend before generating a narrative.

REVIEW

Control the conclusion

Reconcile to source totals, verify units and distinguish fact from hypothesis.

Lab 8 • Evaluate a Fraud Model and Alert Narrative

K3 • A4

Scenario

A card issuer must reduce fraud loss without overwhelming investigators or blocking legitimate customers.

150 MINUTES

Objective

Choose a fraud threshold using precision, recall, business cost and explainability.

SUBMIT

Evidence

A threshold decision, confusion matrix, alert queue and controlled case narrative.

Acceptance: The threshold decision cites precision, recall, cost and capacity; alert explanations use real fields; the generated narrative is labelled draft and evidence-linked.

Lab 8 • evidence journey

Accountability and evidence travel with the work

Lab 9 • Threat-Model and Secure a Finance Agent

K3 • A4

Scenario

The finance query agent is proposed for wider deployment with SharePoint knowledge and workflow connectors.

120 MINUTES

Objective

Apply identity, DLP, prompt-injection, data, tool and monitoring controls to a finance agent.

SUBMIT

Evidence

A threat model, control matrix, adversarial test log and publish recommendation.

Acceptance: Every high risk has a preventive and detective control, test evidence, residual rating and accountable owner; no live credentials or customer data are used.

Lab 9 • evidence journey

Accountability and evidence travel with the work

Future Trends and Innovations in Generative AI for Finance

Finance-agent roadmaps, cost controls, operating models, change leadership and measurable value

05

Competency focus K4 · A5

Finance-agent direction

Finance AI is moving from isolated assistance to process-specific, governed agents.

Assistive to autonomous

Autonomy should expand only after templates, thresholds and monitoring are proven.

Operating-model shift

Finance teams need product ownership for AI-enabled processes.

AI portfolio economics

Total cost includes licences, integration, data, review, controls and change.

Cost controls

Control cost by standardising platforms and reusing governed patterns.

1

01

Shared connectors and knowledge

2

02

Reusable evaluation sets

3

03

Tiered model choice

4

04

Usage budgets and showback

Business case

A defensible case links use, adoption, control and financial outcome.

Lewin for finance AI

Unfreeze, change and refreeze turns a pilot into a controlled operating habit.

Pilot selection

Choose a process with clear data, measurable pain and reversible actions.

Scaling gate

A successful demo is not production readiness.

Vendor roadmap discipline

Roadmap features are planning inputs, not current capabilities.

Workforce readiness

Finance professionals need AI literacy plus stronger judgement and control skills.

Future-proof architecture

Keep data, controls and process logic portable as models change.

Measure realised value

Track outcomes after launch, not only activity or token usage.

Continuous governance

Reassess AI use when data, models, regulations or business context change.

Finance AI use-case portfolio

TRANSFORMATION

Operating pattern

Score initiatives on value, feasibility, risk and reuse

OUTCOME

Value hypothesis

Better investment choices

FAILURE MODE

Primary risk

Optimism bias

GOVERNED DESIGN

Control and evidence

Stage gates and realised-benefit review

Measure: NPV · adoption · risk tier

Finance AI use-case portfolio: control cockpit

KPI NPV • adoption • risk tier • Pattern source: Microsoft business case scenario

Licence and capacity optimisation

FINOPS

Operating pattern

Track agent usage and right-size licences or message capacity

OUTCOME

Value hypothesis

Lower run cost

FAILURE MODE

Primary risk

Under-provisioning critical workflows

GOVERNED DESIGN

Control and evidence

Service tiers and usage budgets

Measure: Cost per task

Licence and capacity optimisation: control cockpit

KPI Cost per task • Pattern source: Microsoft governance guidance

Agent factory

TRANSFORMATION

Operating pattern

Reuse identity, knowledge, tool, evaluation and monitoring patterns

OUTCOME

Measure: Benefits realised

AI investment committee pack: control cockpit

KPI Benefits realised • Pattern source: Financial Services AI RMF

Financial Services AI RMF

CASE

Governance

EVIDENCE

What happened

The 2026 framework adapts NIST AI RMF to financial-services operational, regulatory and consumer-protection considerations.

Transferable pattern

Translate the operating pattern—not the headline—into your finance context.

Control question

What evidence would justify moving from assistive output to a bounded action?

Topic 5 - value-and-control portfolio

INTERPRET

Read the signal

Compare magnitude, exceptions and trend before generating a narrative.

REVIEW

Control the conclusion

Reconcile to source totals, verify units and distinguish fact from hypothesis.

Lab 10 • Build the Finance AI Business Case and Roadmap

K4 • A5

Scenario

The investment committee must decide whether to scale the Northstar finance AI portfolio after the pilots.

150 MINUTES

Objective

Create a stage-gated adoption roadmap with total-cost, benefit, risk and cash-flow controls.

SUBMIT

Evidence

A 12-month roadmap, cash-flow model, NPV, stage gates and benefits-realisation scorecard.

Acceptance: Costs include build, run, control and change; benefits are adoption-adjusted; NPV links to cash-flow cells; each stage gate has evidence, owner and stop condition.

Lab 10 • evidence journey

Decision drill - Accounts payable invoice triage

1

Which source is authoritative?

Route invoices, detect missing fields and draft exception notes

2

Which total must reconcile?

Three-way match, duplicate rules, reviewer approval

3

Which assumption needs an owner?

Lower handling time

4

What evidence proves completion?

Touchless rate · exception ageing

Risk to resolve: Invoice fraud and duplicate payments

Decision drill - Cash application

1

Who can invoke it?

Match remittances to open invoices and explain residuals

2

What data can leave the boundary?

Tolerance rules, customer key validation, audit trail

3

Which tool can write?

Faster posting

4

How is misuse detected?

Auto-match rate · unapplied cash

Risk to resolve: Incorrect customer allocation

Decision drill - Collections prioritisation

1

What baseline cost exists?

Rank overdue accounts and draft context-aware outreach

2

Which value KPI changes?

Approved templates and human send approval

3

What capacity is consumed?

Improved DSO

4

What stop condition protects cash?

Promise-to-pay rate · DSO

Risk to resolve: Unfair or inappropriate communication

Decision drill - Expense policy assistant

- | | | | |
|---|---|--|---|
| <p>1</p> <p>Which source is authoritative?</p> <p>Answer employee expense questions from approved policy</p> | <p>2</p> <p>Which total must reconcile?</p> <p>Effective-date citations and escalation</p> | <p>3</p> <p>Which assumption needs an owner?</p> <p>Fewer queries</p> | <p>4</p> <p>What evidence proves completion?</p> <p>First-contact resolution</p> |
|---|---|--|---|

Risk to resolve: Outdated or unauthorised advice

Decision drill - Regulatory filing summarisation

1

Who can invoke it?

Extract obligations and draft a review checklist

2

What data can leave the boundary?

Primary-source citations and legal review

3

Which tool can write?

Faster interpretation

4

How is misuse detected?

Review hours · citation accuracy

Risk to resolve: Hallucinated requirement

Decision drill • Earnings-call preparation

1

What baseline cost exists?

Synthesize performance drivers and likely stakeholder questions

2

Which value KPI changes?

Reconcile to approved results and disclosures

3

What capacity is consumed?

Better preparation

4

What stop condition protects cash?

Prep cycle time • corrections

Risk to resolve: Selective or misleading narrative

Decision drill - Treasury liquidity briefing

- 1 Which source is authoritative?**

Summarise cash, facilities and forecast risks
- 2 Which total must reconcile?**

As-of timestamps and source reconciliation
- 3 Which assumption needs an owner?**

Faster visibility
- 4 What evidence proves completion?**

Forecast error · liquidity headroom

Risk to resolve: Stale balances

Decision drill - Credit memo drafting

1

Who can invoke it?

Assemble borrower facts and analyst rationale

2

What data can leave the boundary?

Reason codes, source citations, credit approval

3

Which tool can write?

Analyst productivity

4

How is misuse detected?

Turnaround · override rate

Risk to resolve: Bias and unsupported conclusions

Decision drill - Insurance claims summarisation

1

What baseline cost exists?

Summarise documents and flag inconsistencies

2

Which value KPI changes?

Access control, human adjudication, appeal

3

What capacity is consumed?

Faster triage

4

What stop condition protects cash?

Cycle time · rework

Risk to resolve: Sensitive-data leakage and wrongful denial

Decision drill - Financial research synthesis

1

Which source is authoritative?

Summarise filings, transcripts and macro evidence

2

Which total must reconcile?

Citations, as-of dates, restricted recommendation scope

3

Which assumption needs an owner?

Broader coverage

4

What evidence proves completion?

Source coverage · correction rate

Risk to resolve: Unverified market claims

Decision drill - Budget build assistant

1

Who can invoke it?

Create an editable driver-based budget structure

2

What data can leave the boundary?

Formula audit and assumption register

3

Which tool can write?

Faster model assembly

4

How is misuse detected?

Build time · formula defects

Risk to resolve: Hidden hard-codes

Decision drill - Management variance analysis

1

What baseline cost exists?

Identify material period variances and draft drivers

2

Which value KPI changes?

Materiality rules and evidence-backed narrative

3

What capacity is consumed?

Shorter reporting cycle

4

What stop condition protects cash?

Close days · narrative corrections

Risk to resolve: False causality

Decision drill - Balance-sheet reconciliation

1

Which source is authoritative?

Compare account structures and generate reconciliation reports

2

Which total must reconcile?

Deterministic rules, tolerance and reviewer sign-off

3

Which assumption needs an owner?

Faster close

4

What evidence proves completion?

Auto-match rate · aged items

Risk to resolve: Incorrect matching

Decision drill - Intercompany matching

1

Who can invoke it?

Match reciprocal entries and
surface entity or FX differences

2

**What data can
leave the
boundary?**

Entity scoping and elimination
controls

3

**Which tool can
write?**

Fewer unresolved items

4

**How is misuse
detected?**

Unmatched value · ageing

Risk to resolve: Cross-entity access leakage

Decision drill - Revenue bridge

1

What baseline cost exists?

Decompose growth into volume, price, mix and FX

2

Which value KPI changes?

Reconciled bridge and driver definitions

3

What capacity is consumed?

Clearer performance story

4

What stop condition protects cash?

Unexplained variance

Risk to resolve: Incorrect attribution

Decision drill - Rolling forecast

1

Which source is authoritative?

Extend forecast from recent actuals and operational drivers

2

Which total must reconcile?

Back-testing and scenario review

3

Which assumption needs an owner?

Faster reforecast

4

What evidence proves completion?

MAPE · bias

Risk to resolve: Overfitting and stale assumptions

Decision drill - Headcount cost forecast

1

Who can invoke it?

Model hires, attrition, salary, bonus and vacancy timing

2

What data can leave the boundary?

Aggregate data and restricted payroll access

3

Which tool can write?

Better workforce planning

4

How is misuse detected?

Forecast error · vacancy variance

Risk to resolve: Personal-data exposure

Decision drill - Working-capital dashboard

1

What baseline cost exists?

Visualise DSO, DPO, inventory days and cash conversion

2

Which value KPI changes?

Definitions and control totals

3

What capacity is consumed?

Actionable cash view

4

What stop condition protects cash?

Cash conversion cycle

Risk to resolve: Metric inconsistency

Decision drill - Spend anomaly review

1

Which source is authoritative?

Highlight unusual vendor, amount or timing patterns

2

Which total must reconcile?

Risk scores as triage only

3

Which assumption needs an owner?

Leakage reduction

4

What evidence proves completion?

Confirmed exceptions · review load

Risk to resolve: False accusations

Decision drill - Board pack production

1

Who can invoke it?

Assemble charts, narrative and actions from approved workbook

2

What data can leave the boundary?

Single approved source and CFO review

3

Which tool can write?

Shorter reporting cycle

4

How is misuse detected?

Cycle time · revisions

Risk to resolve: Disclosure inconsistency

Decision drill - Internal finance query agent

1

What baseline cost exists?

Answer process and policy questions with citations

2

Which value KPI changes?

Authentication, source permissions and DLP

3

What capacity is consumed?

Reduced support load

4

What stop condition protects cash?

Resolution · escalation

Risk to resolve: Oversharing

Decision drill - Close orchestration agent

1

Which source is authoritative?

Coordinate tasks, owners, evidence and exceptions

2

Which total must reconcile?

Read-only by default and explicit approvals

3

Which assumption needs an owner?

More predictable close

4

What evidence proves completion?

On-time tasks · reopen rate

Risk to resolve: Unapproved journal or sign-off

Decision drill - Collections copilot

- 1 Who can invoke it?**

Bring ERP context into Outlook and prepare response options
- 2 What data can leave the boundary?**

Human approval and communication log
- 3 Which tool can write?**

Scalable outreach
- 4 How is misuse detected?**

DSO · response rate

Risk to resolve: Automated external message risk

Decision drill - Procure-to-pay exception agent

1

What baseline cost exists?

Gather missing evidence and route exceptions

2

Which value KPI changes?

Whitelisted actions and amount thresholds

3

What capacity is consumed?

Reduced queue ageing

4

What stop condition protects cash?

Resolution time

Risk to resolve: Tool abuse

Decision drill • Tax research agent

1

Which source is authoritative?

Retrieve internal positions and authoritative guidance

2

Which total must reconcile?

Jurisdiction filters, effective dates, expert review

3

Which assumption needs an owner?

Faster research

4

What evidence proves completion?

Research time • citation quality

Risk to resolve: Outdated or cross-jurisdiction advice

Decision drill • Audit evidence assistant

1

Who can invoke it?

Index, retrieve and summarise evidence for test procedures

2

What data can leave the boundary?

Evidence IDs and auditor judgement

3

Which tool can write?

Reduced search time

4

How is misuse detected?

Retrieval precision • gaps

Risk to resolve: Evidence incompleteness

Decision drill - Disclosure checklist agent

1

What baseline cost exists?

Map approved disclosures to evidence and owners

2

Which value KPI changes?

Controlled checklist and preparer/reviewer

3

What capacity is consumed?

Fewer omissions

4

What stop condition protects cash?

Open items · late changes

Risk to resolve: Wrong reporting basis

Decision drill - Investment research multi-agent

1

Which source is authoritative?

Separate retrieval, financial analysis, risk challenge and writing

2

Which total must reconcile?

Handoff schemas and independent challenge

3

Which assumption needs an owner?

Traceable analysis

4

What evidence proves completion?

Citation accuracy · disagreement rate

Risk to resolve: Compounding agent errors

Decision drill - Customer service banking agent

1

Who can invoke it?

Answer product and service questions using approved content

2

What data can leave the boundary?

Scope limits and human handoff

3

Which tool can write?

24/7 support

4

How is misuse detected?

Containment · complaints

Risk to resolve: Unsuitable advice

Decision drill • Loan document review

1

What baseline cost exists?

Extract covenants, conditions and exceptions

2

Which value KPI changes?

Clause-level citations and legal review

3

What capacity is consumed?

Faster review

4

What stop condition protects cash?

Review time • missed exceptions

Risk to resolve: Missed clauses

Decision drill - Card fraud detection

- 1 Which source is authoritative?**

Score transactions using behaviour, merchant and device signals
- 2 Which total must reconcile?**

Threshold economics and investigator feedback
- 3 Which assumption needs an owner?**

Lower fraud loss
- 4 What evidence proves completion?**

Recall · precision · loss

Risk to resolve: False positives and model drift

Decision drill - AML investigation summarisation

1

Who can invoke it?

Assemble transactions, entities and evidence into a case narrative

2

What data can leave the boundary?

Evidence links and investigator approval

3

Which tool can write?

Faster investigation

4

How is misuse detected?

Case time · SAR quality

Risk to resolve: Privacy and confirmation bias

Decision drill - Account takeover detection

1

What baseline cost exists?

Detect device, location and behavioural anomalies

2

Which value KPI changes?

Step-up verification and risk thresholds

3

What capacity is consumed?

Faster containment

4

What stop condition protects cash?

Fraud loss · challenge rate

Risk to resolve: Customer friction

Decision drill - Synthetic fraud scenario generation

- | | | | |
|---|--|--|--|
| <p>1</p> <p>Which source is authoritative?</p> <p>Generate rare attack patterns for resilience testing</p> | <p>2</p> <p>Which total must reconcile?</p> <p>Domain review and isolated test data</p> | <p>3</p> <p>Which assumption needs an owner?</p> <p>Broader test coverage</p> | <p>4</p> <p>What evidence proves completion?</p> <p>Scenario coverage</p> |
|---|--|--|--|

Risk to resolve: Unrealistic or unsafe scenarios

Decision drill - Model documentation copilot

- | | | | |
|--|--|--|---|
| <p>1</p> <p>Who can invoke it?</p> <p>Draft model cards, limitations and monitoring summaries</p> | <p>2</p> <p>What data can leave the boundary?</p> <p>Required fields and independent validation</p> | <p>3</p> <p>Which tool can write?</p> <p>Consistent documentation</p> | <p>4</p> <p>How is misuse detected?</p> <p>Documentation defects</p> |
|--|--|--|---|

Risk to resolve: False completeness

Decision drill - Policy compliance monitor

1

What baseline cost exists?

Compare agent configuration with approved control requirements

2

Which value KPI changes?

Configuration inventory and periodic review

3

What capacity is consumed?

Earlier control detection

4

What stop condition protects cash?

Control exceptions

Risk to resolve: Blind spots in telemetry

Decision drill - Prompt-injection test agent

- 1 Which source is authoritative?**

Generate and execute adversarial test cases in a sandbox
- 2 Which total must reconcile?**

Isolated environment and no live secrets
- 3 Which assumption needs an owner?**

Stronger resilience
- 4 What evidence proves completion?**

Attack success rate

Risk to resolve: Unsafe testing against production

Decision drill - Vendor AI due diligence

1

Who can invoke it?

Summarise contracts, controls,
data use and concentration risk

2

**What data can
leave the
boundary?**

Evidence request and
accountable approval

3

**Which tool can
write?**

Faster review

4

**How is misuse
detected?**

Open risks · remediation

Risk to resolve: Reliance on vendor claims

Decision drill - Cyber alert enrichment

1

What baseline cost exists?

Summarise threat intelligence and affected financial assets

2

Which value KPI changes?

Trusted feeds and tool isolation

3

What capacity is consumed?

Faster response

4

What stop condition protects cash?

MTTR · false escalation

Risk to resolve: Poisoned external content

Decision drill - Fair lending monitoring

- | | | | |
|---|---|--|--|
| <p>1</p> <p>Which source is authoritative?</p> <p>Test model outcomes and explanations across groups</p> | <p>2</p> <p>Which total must reconcile?</p> <p>Governed fairness testing and remediation</p> | <p>3</p> <p>Which assumption needs an owner?</p> <p>Reduced bias risk</p> | <p>4</p> <p>What evidence proves completion?</p> <p>Disparity · override rate</p> |
|---|---|--|--|

Risk to resolve: Sensitive attribute misuse

Decision drill • Finance AI use-case portfolio

1

Who can invoke it?

Score initiatives on value, feasibility, risk and reuse

2

What data can leave the boundary?

Stage gates and realised-benefit review

3

Which tool can write?

Better investment choices

4

How is misuse detected?

NPV • adoption • risk tier

Risk to resolve: Optimism bias

Decision drill - Licence and capacity optimisation

1

What baseline cost exists?

Track agent usage and right-size licences or message capacity

2

Which value KPI changes?

Service tiers and usage budgets

3

What capacity is consumed?

Lower run cost

4

What stop condition protects cash?

Cost per task

Risk to resolve: Under-provisioning critical workflows

Decision drill - Agent factory

- | | | | |
|--|---|---|--|
| <p>1</p> <p>Which source is authoritative?</p> <p>Reuse identity, knowledge, tool, evaluation and monitoring patterns</p> | <p>2</p> <p>Which total must reconcile?</p> <p>Catalogue, templates and retirement</p> | <p>3</p> <p>Which assumption needs an owner?</p> <p>Faster safe delivery</p> | <p>4</p> <p>What evidence proves completion?</p> <p>Lead time · reuse</p> |
|--|---|---|--|

Risk to resolve: Agent sprawl

Decision drill - AI-enabled finance operating model

1

Who can invoke it?

Define product, control, data and platform ownership

2

What data can leave the boundary?

RACI and lifecycle governance

3

Which tool can write?

Sustainable scale

4

How is misuse detected?

Incidents · release lead time

Risk to resolve: Ambiguous accountability

Decision drill - Legacy process modernisation

1

What baseline cost exists?

Use agents to bridge old workflows while redesigning the target process

2

Which value KPI changes?

Sunset plan and architecture review

3

What capacity is consumed?

Faster transition

4

What stop condition protects cash?

Retired steps · defects

Risk to resolve: Permanent fragile workarounds

Decision drill - Continuous controls monitoring

- | | | | |
|--|---|--|--|
| <p>1</p> <p>Which source is authoritative?</p> <p>Monitor control evidence and exceptions across the period</p> | <p>2</p> <p>Which total must reconcile?</p> <p>Materiality and owner workflows</p> | <p>3</p> <p>Which assumption needs an owner?</p> <p>Earlier detection</p> | <p>4</p> <p>What evidence proves completion?</p> <p>Exception closure</p> |
|--|---|--|--|

Risk to resolve: Alert fatigue

Decision drill - Digital finance coach

1

Who can invoke it?

Deliver role-based guidance
using approved internal learning

2

**What data can
leave the
boundary?**

Curated knowledge and
feedback

3

**Which tool can
write?**

Faster adoption

4

**How is misuse
detected?**

Adoption · competency

Risk to resolve: Incorrect guidance

Decision drill - AI investment committee pack

1

What baseline cost exists?

Combine value, risk, cost and readiness evidence for gate decisions

2

Which value KPI changes?

Independent challenge and post-investment review

3

What capacity is consumed?

Disciplined scaling

4

What stop condition protects cash?

Benefits realised

Risk to resolve: Metric gaming

Decision drill - Accounts payable invoice triage

1

Which source is authoritative?

Route invoices, detect missing fields and draft exception notes

2

Which total must reconcile?

Three-way match, duplicate rules, reviewer approval

3

Which assumption needs an owner?

Lower handling time

4

What evidence proves completion?

Touchless rate · exception ageing

Risk to resolve: Invoice fraud and duplicate payments

Decision drill - Cash application

1

Who can invoke it?

Match remittances to open invoices and explain residuals

2

What data can leave the boundary?

Tolerance rules, customer key validation, audit trail

3

Which tool can write?

Faster posting

4

How is misuse detected?

Auto-match rate · unapplied cash

Risk to resolve: Incorrect customer allocation

Decision drill - Collections prioritisation

1

What baseline cost exists?

Rank overdue accounts and draft context-aware outreach

2

Which value KPI changes?

Approved templates and human send approval

3

What capacity is consumed?

Improved DSO

4

What stop condition protects cash?

Promise-to-pay rate · DSO

Risk to resolve: Unfair or inappropriate communication

Decision drill - Expense policy assistant

- | | | | |
|---|---|--|---|
| <p>1</p> <p>Which source is authoritative?</p> <p>Answer employee expense questions from approved policy</p> | <p>2</p> <p>Which total must reconcile?</p> <p>Effective-date citations and escalation</p> | <p>3</p> <p>Which assumption needs an owner?</p> <p>Fewer queries</p> | <p>4</p> <p>What evidence proves completion?</p> <p>First-contact resolution</p> |
|---|---|--|---|

Risk to resolve: Outdated or unauthorised advice

Decision drill - Regulatory filing summarisation

1

Who can invoke it?

Extract obligations and draft a review checklist

2

What data can leave the boundary?

Primary-source citations and legal review

3

Which tool can write?

Faster interpretation

4

How is misuse detected?

Review hours · citation accuracy

Risk to resolve: Hallucinated requirement

Decision drill - Earnings-call preparation

1

What baseline cost exists?

Synthesize performance drivers and likely stakeholder questions

2

Which value KPI changes?

Reconcile to approved results and disclosures

3

What capacity is consumed?

Better preparation

4

What stop condition protects cash?

Prep cycle time · corrections

Risk to resolve: Selective or misleading narrative

Decision drill - Treasury liquidity briefing

- 1 Which source is authoritative?**

Summarise cash, facilities and forecast risks
- 2 Which total must reconcile?**

As-of timestamps and source reconciliation
- 3 Which assumption needs an owner?**

Faster visibility
- 4 What evidence proves completion?**

Forecast error · liquidity headroom

Risk to resolve: Stale balances

Decision drill - Credit memo drafting

1

Who can invoke it?

Assemble borrower facts and analyst rationale

2

What data can leave the boundary?

Reason codes, source citations, credit approval

3

Which tool can write?

Analyst productivity

4

How is misuse detected?

Turnaround · override rate

Risk to resolve: Bias and unsupported conclusions

Decision drill - Insurance claims summarisation

1

What baseline cost exists?

Summarise documents and flag inconsistencies

2

Which value KPI changes?

Access control, human adjudication, appeal

3

What capacity is consumed?

Faster triage

4

What stop condition protects cash?

Cycle time · rework

Risk to resolve: Sensitive-data leakage and wrongful denial

Decision drill - Financial research synthesis

1

Which source is authoritative?

Summarise filings, transcripts and macro evidence

2

Which total must reconcile?

Citations, as-of dates, restricted recommendation scope

3

Which assumption needs an owner?

Broader coverage

4

What evidence proves completion?

Source coverage · correction rate

Risk to resolve: Unverified market claims

Decision drill - Budget build assistant

1

Who can invoke it?

Create an editable driver-based budget structure

2

What data can leave the boundary?

Formula audit and assumption register

3

Which tool can write?

Faster model assembly

4

How is misuse detected?

Build time · formula defects

Risk to resolve: Hidden hard-codes
