Lab 1: Prioritise a Finance AI Use-Case Portfolio

Course: Generative AI for Finance and Fintech (TGS-2026065050)

Mapping: K2 · A1

Suggested time: 90 minutes

Objective: Score finance AI opportunities by value, feasibility, risk and learning speed.

Scenario

Northstar Finance is selecting its first governed AI pilots across FP&A, controllership, treasury, risk and customer operations.

Files

- `finance-ai-use-case-portfolio-starter.xlsx` - learner working file
- `finance-ai-use-case-portfolio-solution.xlsx` - completed formulas, controls and charts for review
- `evidence-checklist.md` - submission and verification checklist

Before you begin

- Use only the supplied synthetic data.
- Do not enter live customer, payroll, account, credential or confidential data.
- If the required Microsoft feature is not enabled in your tenant, complete the workbook-based simulation and record the limitation.
- Keep facts, assumptions, AI suggestions and reviewer decisions visibly separate.

Detailed procedure

Step 1: Review the synthetic use-case backlog and confirm the scoring definitions.

Record the evidence for Step 1 in the checklist before continuing.

Step 2: Use the weighted scoring sheet to rank initiatives.

Record the evidence for Step 2 in the checklist before continuing.

Step 3: Challenge the top three for data, control and adoption constraints.

Record the evidence for Step 3 in the checklist before continuing.

Step 4: Select one pilot and complete the charter with owner, scope, baseline, KPI and stop condition.

Record the evidence for Step 4 in the checklist before continuing.

Step 5: Peer-review the decision and record unresolved evidence.

Record the evidence for Step 5 in the checklist before continuing.

Prompt quality pattern

> Role: You are assisting a finance professional. Task: analyse only the named workbook table. Data boundary: do not use external or unstated facts. Controls: reconcile totals, identify missing evidence, and label assumptions. Output: return a concise table of finding, evidence, confidence, reviewer action and source cell or table.

Acceptance criteria

- Weights total 100%; every shortlisted use case has a named owner, baseline KPI, risk tier and stop condition.
- All generated claims have been checked against the workbook or approved knowledge.
- No live credentials, personal data or confidential business data appear in the evidence.
- A human reviewer and approval status are recorded.

Deliverable

A prioritised portfolio and one-page pilot charter.

Reflection

1. What did the AI accelerate?
2. What still required finance judgement?
3. Which control prevented the most serious failure?
4. What evidence is needed before this design can scale?
