Lab 5: Create a Microsoft 365 Finance Decision Pack

Course: Generative AI for Finance and Fintech (TGS-2026065050)

Mapping: A3

Suggested time: 90 minutes

Objective: Turn approved Excel evidence into a controlled Word brief, PowerPoint story and collections message.

Scenario

The CFO needs a board-ready summary and a draft response to a major overdue customer.

Files

- `northstar-decision-pack-source-starter.xlsx` - learner working file
- `northstar-decision-pack-source-solution.xlsx` - completed formulas, controls and charts for review
- `evidence-checklist.md` - submission and verification checklist

Before you begin

- Use only the supplied synthetic data.
- Do not enter live customer, payroll, account, credential or confidential data.
- If the required Microsoft feature is not enabled in your tenant, complete the workbook-based simulation and record the limitation.
- Keep facts, assumptions, AI suggestions and reviewer decisions visibly separate.

Detailed procedure

Step 1: Verify the approved KPI and collections tables in the workbook.

Record the evidence for Step 1 in the checklist before continuing.

Step 2: Use Microsoft 365 Copilot to draft a Word decision brief with source labels.

Record the evidence for Step 2 in the checklist before continuing.

Step 3: Create a concise PowerPoint narrative using only approved figures.

Record the evidence for Step 3 in the checklist before continuing.

Step 4: Draft an Outlook collections message that reflects account history and policy.

Record the evidence for Step 4 in the checklist before continuing.

Step 5: Mark the message as draft and route it for human approval.

Record the evidence for Step 5 in the checklist before continuing.

Step 6: Cross-check every repeated number across Excel, Word and PowerPoint.

Record the evidence for Step 6 in the checklist before continuing.

Prompt quality pattern

> Role: You are assisting a finance professional. Task: analyse only the named workbook table. Data boundary: do not use external or unstated facts. Controls: reconcile totals, identify missing evidence, and label assumptions. Output: return a concise table of finding, evidence, confidence, reviewer action and source cell or table.

Acceptance criteria

- All repeated figures match the source workbook; facts and recommendations are separated; the external message remains a draft with an approver.
- All generated claims have been checked against the workbook or approved knowledge.
- No live credentials, personal data or confidential business data appear in the evidence.
- A human reviewer and approval status are recorded.

Deliverable

A three-part decision pack with traceable numbers and approval status.

Reflection

1. What did the AI accelerate?
2. What still required finance judgement?
3. Which control prevented the most serious failure?
4. What evidence is needed before this design can scale?
